2014 State Damage Prevention Program Grants Final Report
CFDA Number: 20.720

Award Number: DTPH56-14-G-PPS18
Project Title: Dig Safely New York State Damage Prevention Grant
Date Submitted: February 23, 2016
Submitted by: Kevin Hopper

Specific Objective(s) of the Agreement

Under this grant agreement, the DSNY will:

- Support Public Awareness and Stakeholder Education
- Foster and promote the use of improving technologies

Workscope

Under the terms of this grant agreement, the Grantee will address the following elements listed in 49 U.S.C. §60134 (b) through the actions it has specified in its Application.

- **Element 5 (Public Education):** A process for fostering and ensuring active participation by all stakeholders in public education for damage prevention activities.
- **Element 8 (Technology):** A process for fostering and promoting the use, by all appropriate stakeholders, of improving technologies that may enhance communications, underground pipeline locating capability, and gathering and analyzing information about the accuracy and effectiveness of locating programs.

Accomplishments for the grant period (Item 1 under Agreement Article IX, Section 9.02 Final Report: “A comparison of actual accomplishments to the objectives established for the period.”)

[How did you progress on each of the items/elements provided in the “Specific Objectives” and “Workscope”? How did your progress compare with established objectives? Start with an overall description followed by item-by-item or element-by-element detail if possible.]

Project 1 Description

Introduction of Tableau Software:

Over the past seven years, Dig Safely New York, Inc. has implemented several programs to further our mission to prevent damages to underground facilities in NY State. Many of these programs have been supported with software solutions that allow us to collect and measure the effectiveness of our programs. The analysis of this data can be difficult, and very time consuming, as the data is stored and reported in several disparate data silos. Additionally, some data, such as Dirt damage data, can be up to a year old before it is reported making it difficult to get any real-time sense of what is happening from a damage prevention perspective within the State. As a result of this, several facility operators have asked if Dig Safely New York

could provide damage data and call-volume ratios real time. This request prompted Dig Safely New York to investigate how we can better facilitate analysis of these important multiple data sources in one tool that serves to further damage prevention efforts by all stakeholders. The results of the investigation led to propose the implementation of Tableau Software as part of our 2014 grant submission. Tableau software will allow Dig Safely New York to combine our multiple data sources, (Call volume and ticket data, damage data (provided real-time from Gas Operators) educational efforts (Irth Solutions i-aware software) along with other pertinent data sources and report on them in a very meaningful way. Tableau will allow Dig Safely New York and its participating stakeholders to quickly visualize data. As an example, the educational efforts in a county vs. damages vs. call volume can easily be brought into one business intelligence solution, giving us the ability to identify both positive and negative trends related to damages and educational efforts in NY. Tableau allows implementing of business dashboards as an indispensable tool that informs with a glance.

Tableau dashboard tools provide:

- *Interactivity: Filtering, highlighting, and other dashboard solutions*
- *The ability to combine multiple data sources*
- *Fast creation by a business user*
- *Easy sharing with support for existing security*
- *Visual analysis best practices*

Tableau allows non-technical users to create interactive, real-time dashboards in minutes. Adding filters and drilling down is as simple as a few clicks. Sharing those dashboards on Tableau Server and embedding them into corporate portals or any web page is point-and-click. And visual best practices are baked in, so you can build a great dashboard and communicate effectively across multiple platforms.

The goal of this project is to implement Tableau Server allowing Dig Safely New York and its members to combine multiple data sources into one simple easy to communicate solution. The software will then be integrated in or corporate web portal (Drupal Web Integration) for permission based dashboards. The intent of these dashboards will allow members to interact with their data securely and see how they are performing real-time. The Dashboards will provide several insights including but not limited to, damage data per 1000 location requests on a month to date and year to date basis, positive response metrics and educational activities. These dashboards update automatically. Members will also be able to filter educational activities, media campaigns and see correlations between education and outreach on damages within different regions. Tableau will allow us to have this valuable information at our fingertips, furthering our ability to provide concise, informed and effective damage prevention programs.

Please review the following resources for a review of Tableau:

<http://www.tableausoftware.com/products/server>

<http://www.tableausoftware.com/solutions/data-visualization#video>

Following the grant award, the Tableau Software and Server was purchased and installed at Dig Safely New York, Inc.'s headquarters in East Syracuse, NY. After the install, the Technical Team underwent one week of training from a Tableau representative. All of Dig Safely New York's data sources were linked to the software and tested. Dashboards were run and tested to ensure accuracy, and interaction capabilities are working properly. Testing continued as we pulled in

member utility data to ensure functionality is on-point after implementation and roll-out. Dig Safely New York will also began working with its third-party web developer Face First Creative on implementing a Drupal-web based portal for the Tableau Software. Member utilities, as well as departments within the Dig Safely New York organization, have begun using Tableau to analyze disparate data sources, including, but not limited to, field activities versus ticket volume, attendance and outreach at events, damage data, etc.

Project 2 Description

Development of Underground Utility Training Site

New York State damage data suggests that the number one cause of underground utility damage is no longer failing to call before digging, as no call damages continue to be reduced annually. The largest cause of underground facility damage is now unsafe digging practices by the excavator. As a result of this trend, Dig Safely New York proposed under the scope of project two of this grant submission to develop and install a mock utility training site where safe digging practices can be demonstrated in a controlled environment. Dig Safely New York dedicated a portion of its four-acre lot to install the underground training site to be utilized for training and product demonstrations such as directional drilling, ground penetration radar, soil pick's etc.

The site will be complete with:

- *10'x12' shed to simulate residence*
- *200ft Joint trench (electric, communication, and gas)*
- *100ft Install of water and sewer build to depth and standards*
- *20ft service trench to shed with (electric secondary to meter box, telephone fiber drop to riser at shed, CATV with riser and demarc box and 2 inch gas service buried @18inches, including riser and meter bracket)*
- *Observation Pit (this will allow visualization of underground install through Plexiglas window)*

The goal of this project is to further our ability of offer safe digging best practices through comprehensive training and demonstrations. This site will serve as a resource to the various stakeholders in New York, further enhancing their ability to perform safe excavations. Excavators, locators and facility operators will be able to utilize this site to safely and effectively learn best practices. Dig Safely New York, anticipates holding several training demonstrations at this site annually. Elements of this project affect the following elements 1, 4, 5, 8 and 9.

Following the grant award, Dig Safely New York had developed a design for the Underground Utility Training Site. This design was completed in early March, but because of the unpredictable New York weather, Dig Safely New York was unable to begin any construction/installation. The project then got held up with the Town of Dewitt Planning

Board, as receiving permits to complete the build-out was a timely process. Permits were finally granted after three meetings with the Town Planning Board. Site Construction, although delayed, was completed on December 28, 2015, before the new year.

Quantifiable Metrics/Measures of Effectiveness (Item 2 under Article IX, Section 9.02 Final Report: “Where the output of the project can be quantified, a computation of the cost per unit of output.”)

[This may be difficult to explain for every grant project, but we’re trying to get a sense of how effective this grant work has been in improving your damage prevention program. If your grant is more data oriented, you likely had some sort of metrics in mind to improve upon. If so, what were those metrics and how does the data look now compared to when the program started? If you’re doing something along the lines of enforcement that involves incident review, how many cases have you been able to review/close and/or fines collected compared to before the grant work? If you are working on something more along the lines of public awareness, how many stakeholders have you been able to reach? Even if you don’t have the metrics fully defined, put whatever you can here.]

- For both projects under this grant, it is difficult to provide quantifiable metrics however, upon utilization for a period of six months to a year, both projects we will be able to report on the following:

Tableau Software:

We will be able to provide metrics on the number of member utilities utilizing the Tableau dashboards, as well as analyze the data sources we have in a timely and efficient manner to provide more proactive education and promotional outreach initiatives.

Underground Utility Training Site:

We will be able to report on methods of training and education utilizing the new on-site underground training center, as well as the number of people and organizations utilizing the training center. Photos will be made available.

Issues, Problems or Challenges (Item 3 under Article IX, Section 9.02 Final Report: “The reasons for slippage if established objectives were not met.”)

[If the project has successfully concluded on schedule, simply state that there are no issues, problems or challenge to report. If there have been delays for any reason, explain what they are and how they have impacted the grant work. For instance, with some States, even after an agreement is in place, it has to be sent back to the Governor’s office for approval, which takes more time than originally anticipated. Even if work began immediately after the agreement was in place, other delays could have been caused by personnel changes or issues that arose as the project progressed.]

For Project 1, Tableau Software, there were no issues, problems or challenges to report. Screen Shots and Reports can be found in Appendix 2 of this report.

For Project 2, Underground Utility Training Site, however, there were several delays holding up the progression and causing the site to not be completed by the September 2015 timeframe. The first delay was in the Dig Safely New York's Board of Director's approval for design of underground training site. Once the design was finally approved, the second delay was in the Town of Dewitt Planning Board. It took several meetings with the Town Planning Board to retain the necessary permits to start the underground training facility due to the fact that the Planning Board only meets on certain occasions per month. PHSMA was contacted immediately when Dig Safely New York realized the project wouldn't be completed by the September deadline. The project itself, however, took two weeks to implement once permits were obtained and was completed by December 28, 2015. Pictures of the completed site are attached in Appendix 1 of this report.

Final Financial Status Report

[Per the instructions in Article IX, Section 9.04 of your agreement (included below), the financial status report should be submitted with this final report to the Agreement Administrator (AA) and the Agreement Officer's Representative (AOR). Please see instructions below and include supporting documentation such as invoices, receipts, spreadsheets, etc. However, if there are any issues with the Financial Status Report or additional explanation is needed, please provide that information here. If there are any delays for whatever reasons, these should be communicated to the AA and AOR in advance.

From Article IX, Section 9.04 of your agreement: "At the end of the grant period, the Recipient must submit a Final Federal Financial Report, Standard Form 425 (SF-425), to report the status of all funds. In addition to the SF-425, the Recipient should provide the breakdown of costs for each object class category (Personnel, Fringe Benefits, Travel, Equipment, Supplies, Contractual, Other, and Indirect Charges). The Final Financial Status Report must be submitted to the AOR and the AA via e-mail, no later than 90 days after the grant period end date (see Section 1.03). If possible this report should be submitted, along with the Final Report, within 30 days after the grant period end date."]

The Final Financial Status Report can be found in Attachment 1 of this report.

The enclosures for the Final Financial Status Report can be found in Attachment 2 of this report.

Requests of the AOR and/or PHMSA

[In most cases, any questions or actions requested of the AOR and PHMSA (such as grant modifications) should have been addressed in advance of filing the report. If this is the case, simply state "No actions requested at this time" or explain any actions that are currently in process. However, if something has come up recently, or if you haven't been able to discuss with the AOR yet, please describe here.]

Reimbursement will be requested utilizing the Department of Transportation Delphi System. Thanks for accommodating our need for an extension.

 OMB Approval Number: 0348-0061
 Expiration Date: 10/31/2011

Paperwork Burden Statement

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is 0348-0061. Public reporting burden for this collection of information is estimated to average 1.5 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0060), Washington, DC 20503.
